

Home Health Services provides skilled and personal medical care from the comfort of home. Home care is a convenient, cost-effective alternative to traditional inpatient hospital care and is provided under the supervision of a physician.

Our comprehensive services include:

- Skilled nursing
- Physical therapy
- Speech therapy
- Nursing assistants
- Social work
- Occupational therapy
- Nutritional guidance
- Pastoral care services
- Self Pay plans available
- Accept most insurance

Shared medical record program and community affiliations allow seamless collaboration for consistent communication between Home Health services and facilities as well as smooth Hospice and palliative care transition.

We also provide family support and education to keep loved ones involved in the care process.

As a part of Self Regional Healthcare, Home Health Services provides access to advanced health care services and an expanding range of specialty care services.

Hours of Service

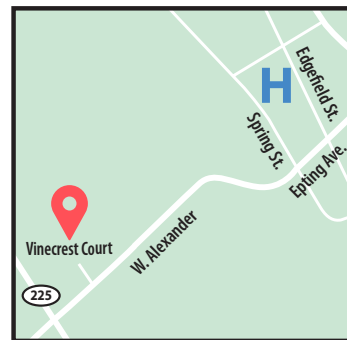

Business office hours:

Skilled Nursing Care

Our professional registered nurses provide skilled health care services in the comfort of home according to physician instructions. The following services are available seven days a week and on call 24/7 from our experienced staff:

- Providing nursing care plan, services, treatments and preventative procedures for the patient's care and safety
- Observing signs and symptoms and reporting to the physician reactions to treatments, including medicines and changes in the patient's physical or emotional condition
- Teaching, supervising and counseling the patient and family members about nursing care needs
- Providing inclusive discharge summary for the physician
- Providing advanced nursing services, including I.V. therapy, hyperalimentation, wound care and home ventilator use
- Telemonitoring system upon a physician's request to report weight and vitals daily

Physical Therapy

Registered physical therapists provide skilled care for patients with temporary or permanent disability or pain:

- Evaluation and testing of joint mobility, strength, posture, gait, brace or artificial limb fit and function
- Strengthening exercises and mobility activities to help regain lost muscle control
- Treatment to decrease or relieve pain
- Evaluation and treatment of children with decreased mobility skills
- Providing rehab following orthopedic injuries, joint replacements and amputations

Occupational Therapy

Our occupational therapists help patients learn skills to improve and restore quality of life and independence with these services:

- Providing treatment to restore muscle tone and ability to perform or resume everyday activities
- Evaluating and establishing goals to maximize independence in the home
- Guiding and instructing patients in prescribed therapeutic self-care and creative activities
- Teaching family members how to participate in and continue the treatment process
- Home management of neurologic, cardiac and orthopedic symptoms

Speech Therapy

The certified speech pathologist evaluates, plans and implements these treatment programs for communication disorders:

- Evaluating patient for expressive and receptive language disorders
- Planning and providing a comprehensive speech therapy program for the patient and assisting family members in training and techniques
- Treatment of swallowing disorders
- Trach assessment and education

Medical Social Services

Our staff social workers provide people with skills and support in addressing challenges they face:

- Assessing and enhancing ability to address medical, emotional and environmental issues
- Helping patients and family members obtain services needed for rehabilitation
- Utilizing health, welfare and community resources to support patients in returning to life in the community

Home Health Aides

All home health aides are trained in the agency's inservice program under the direction of our nursing and paramedical staff and have at least one year of patient care experience in an accredited hospital.

Home health aides are experienced in providing the following services:

- Helping the patient perform personal hygiene
- Assisting patients in moving around the home
- Helping to maintain a healthful, safe environment
- Assisting with certain rehabilitation treatments when ordered by physician and approved and supervised by a nurse
