

Self Regional Healthcare

2022 Community Health Needs Assessment:
Data Assessment

Key Elements of CHNA Process

Sources

- **Americas Health Rankings:** For nearly three decades, America's Health Rankings has provided an analysis of national health on a state-by-state basis by evaluating a historical and comprehensive set of health, environmental and socioeconomic data to determine national health benchmarks and state rankings.
- **Centers for Disease Control and Prevention. National Center for Health Statistics:** This source provided stats of the states and is where data was retrieved for South Carolina. This source provides birth data, leading causes of death, mortality data, and other South Carolina data. The data provided by this source shows state, national and state rank.
- **Community Commons:** Community Commons is a public website that provides data, tools and stories to improve communities and inspire change. Ninety percent of the secondary data was found on the Community Commons site. The site provides data and mapping capability to develop community health needs assessments.
- **Live Healthy South Carolina:** Live Healthy South Carolina is a statewide collaborative to improve the health of all South Carolinians. Everyone deserves an opportunity at a healthy life, and you too, can help make a difference. The Alliance for a Healthier South Carolina led the development of Live Healthy South Carolina, and two member organizations provided key support, the South Carolina Department of Health and Environmental Control (DHEC) and the South Carolina Office of Rural Health (SCORH).

Sources, cont.

- **Sg2:** Sg2 was used for demographics, physician demand, inpatient and outpatient and emergency room estimates. This information was pulled for all seven counties in the Self Regional Healthcare service area. 2022 demographics were included. The Inpatient and Outpatient Estimators were used at a county level to estimate utilization by disease state over the next five years.
- **South Carolina Department of Health and Environmental Control (SCDHEC):** As the state agency responsible for protecting public health and the environment, SCDHEC requires timely, efficient and effective access to information about the state's health, land, water, air and coastal resources. The GIS program mission is to provide core geospatial technology infrastructure, tools and services to support SCDHEC program operation, policy evaluation, and decision-making. The Community Health Profiles are available for each county in South Carolina.
- **2022 County Health Rankings:** This source is a collaboration between the Robert Wood Johnson Foundation and the University of Wisconsin Population Health Institute. It gives a general snapshot of how healthy each county is in relation to others in the same state. It measures and ranks both health outcomes and health factors that lead to those outcomes. Each indicator is weighed, standardized and ranked in order to come up with an overall ranking of health for each county in South Carolina.

Sources, cont.

- **South Carolina Law Enforcement Division (SLED):** The primary mission of the State Law Enforcement Division is to provide quality manpower and technical assistance to law enforcement agencies and to conduct investigations on behalf of the state as directed by the Governor and Attorney General.
- **The Commonwealth Fund:** The primary mission is to promote a high-performing health care system that achieves better access, improved quality, and greater efficiency, particularly for society's most vulnerable, including low-income people, the uninsured, and people of color.
- **South Carolina Department of Alcohol and Other Drug Abuse Services:** The mission is to ensure the availability and quality of a continuum of substance use services, thereby improving the health status, safety, and quality of life of individuals, families, and communities across South Carolina.

2022 County Health Rankings

Health outcomes represent how healthy a county is right now. They reflect the physical and mental well-being of residents through measures representing the length and quality of life typically experienced in the community.

Health factors represent things that, if modified, can improve length and quality of life. They are predictors of how healthy our communities can be in the future

The model shows that **policies and programs** at the local, state, and federal levels play an important role in shaping health factors that in turn, influence a community's health outcomes.

Priorities are
aligned with the
current
South Carolina
State Health
Improvement Plan.

South Carolina State Health Improvement Plan 2018-2023

Live Healthy South Carolina is a statewide collaborative led by the Alliance for a Healthier South Carolina to systematically assess and advance the health of all South Carolinians.

Resilient Children

Build resilience in South Carolina's children through safe and supportive environments.

Chronic Health Conditions

Partners take action to promote healthy lifestyles and environments that prevent chronic conditions.

Behavioral Health

Create a sustainable system of behavioral health care.

Health Care Transformation

Address factors outside of health care that affect health and look through a consumer viewpoint to link primary care, behavioral health, oral health and supports/resources.

Factors that Affect Health

Create safe, livable environments that improve the conditions in which people live, work, pray and play.
